

Topics common to Paper 1 and Paper 2

Topic 1 – Key concepts in biology

Students should:	Maths skills
1.1 Explain how the sub-cellular structures of eukaryotic and prokaryotic cells are related to their functions, including: <ul style="list-style-type: none"> a animal cells – nucleus, cell membrane, mitochondria and ribosomes b plant cells – nucleus, cell membrane, cell wall, chloroplasts, mitochondria, vacuole and ribosomes c bacteria – chromosomal DNA, plasmid DNA, cell membrane, ribosomes and flagella 	
1.2 Describe how specialised cells are adapted to their function, including: <ul style="list-style-type: none"> a sperm cells – acrosome, haploid nucleus, mitochondria and tail b egg cells – nutrients in the cytoplasm, haploid nucleus and changes in the cell membrane after fertilisation c ciliated epithelial cells 	
1.3 Explain how changes in microscope technology, including electron microscopy, have enabled us to see cell structures with more clarity and detail than in the past and increased our understanding of the role of sub-cellular structures	
1.4 Demonstrate an understanding of number, size and scale, including the use of estimations and explain when they should be used	1d 2h
1.5 Demonstrate an understanding of the relationship between quantitative units in relation to cells, including: <ul style="list-style-type: none"> a milli (10^{-3}) b micro (10^{-6}) c nano (10^{-9}) d pico (10^{-12}) e calculations with numbers written in standard form	1b 2a 2h
1.6 <i>Core Practical: Investigate biological specimens using microscopes, including magnification calculations and labelled scientific drawings from observations</i>	1d 2a, 2h 3b
1.7 Explain the mechanism of enzyme action including the active site and enzyme specificity	
1.8 Explain how enzymes can be denatured due to changes in the shape of the active site	
1.9 Explain the effects of temperature, substrate concentration and pH on enzyme activity	2c, 2f 4a, 4c

Students should:		Maths skills
1.10	<i>Core Practical: Investigate the effect of pH on enzyme activity</i>	2c, 2f 4a, 4c
1.11	Demonstrate an understanding of rate calculations for enzyme activity	1a, 1c
1.12	Explain the importance of enzymes as biological catalysts in the synthesis of carbohydrates, proteins and lipids and their breakdown into sugars, amino acids and fatty acids and glycerol	
1.13B	<i>Core Practical: Investigate the use of chemical reagents to identify starch, reducing sugars, proteins and fats</i>	
1.14B	Explain how the energy contained in food can be measured using calorimetry	1a 2a
1.15	Explain how substances are transported into and out of cells, including by diffusion, osmosis and active transport	
1.16	<i>Core Practical: Investigate osmosis in potatoes</i>	1c 2b, 2f 4a, 4c
1.17	Calculate percentage gain and loss of mass in osmosis	1a, 1c 4a, 4c

Use of mathematics

- Demonstrate an understanding of number, size and scale and the quantitative relationship between units (2a and 2h).
- Use estimations and explain when they should be used (1d).
- Carry out rate calculations for chemical reactions (1a and 1c).
- **Calculate with numbers written in standard form (1b).**
- Plot, draw and interpret appropriate graphs (4a, 4b, 4c and 4d).
- Translate information between numerical and graphical forms (4a).
- Construct and interpret frequency tables and diagrams, bar charts and histograms (2c).
- Use a scatter diagram to identify a correlation between two variables (2g).
- Understand and use simple compound measures such as the rate of a reaction (1a and 1c).
- Calculate the percentage gain and loss of mass (1c).
- Use fractions and percentages (1c).
- Calculate arithmetic means (2b).
- Carry out rate calculations (1a and 1c).

Suggested practicals

- Investigate the effect of different concentrations of digestive enzymes, using and evaluating models of the alimentary canal.
- Investigate the effect of temperatures and concentration on enzyme activity.
- Investigate plant and animal cells with a light microscope.
- Investigate the effect of concentration on rate of diffusion.

Topics for Paper 1

Topic 2 – Cells and control

Students should:	Maths skills
2.1 Describe mitosis as part of the cell cycle, including the stages interphase, prophase, metaphase, anaphase and telophase and cytokinesis	
2.2 Describe the importance of mitosis in growth, repair and asexual reproduction	
2.3 Describe the division of a cell by mitosis as the production of two daughter cells, each with identical sets of chromosomes in the nucleus to the parent cell, and that this results in the formation of two genetically identical diploid body cells	
2.4 Describe cancer as the result of changes in cells that lead to uncontrolled cell division	
2.5 Describe growth in organisms, including: a cell division and differentiation in animals b cell division, elongation and differentiation in plants	
2.6 Explain the importance of cell differentiation in the development of specialised cells	
2.7 Demonstrate an understanding of the use of percentiles charts to monitor growth	1c 4a
2.8 Describe the function of embryonic stem cells, stem cells in animals and meristems in plants	1d
2.9 Discuss the potential benefits and risks associated with the use of stem cells in medicine	
2.10B Describe the structures and functions of the brain including the cerebellum, cerebral hemispheres and medulla oblongata	
2.11B Explain how the difficulties of accessing brain tissue inside the skull can be overcome by using CT scanning and PET scanning to investigate brain function	1d 2d
2.12B Explain some of the limitations in treating damage and disease in the brain and other parts of the nervous system, including spinal injuries and brain tumours	
2.13 Explain the structure and function of sensory receptors, sensory neurones, relay neurones in the CNS, motor neurones and synapses in the transmission of electrical impulses, including the axon, dendron, myelin sheath and the role of neurotransmitters	2g 4a, 4c
2.14 Explain the structure and function of a reflex arc including sensory, relay and motor neurones	

Students should:	Maths skills
2.15B Explain the structure and function of the eye as a sensory receptor including the role of: <ul style="list-style-type: none"> a the cornea and lens b the iris c rod and cone cells in the retina 	2c
2.16B Describe defects of the eye including cataracts, long-sightedness, short-sightedness and colour blindness	
2.17B Explain how cataracts, long-sightedness and short-sightedness can be corrected	

Use of mathematics

- Use estimations and explain when they should be used (1d).
- Use percentiles and calculate percentage gain and loss of mass (1c).
- Translate information between numerical and graphical forms (4a).
- Use a scatter diagram to identify a correlation between two variables (2g).
- Extract and interpret information from graphs, charts and tables (2c and 4a).
- Extract and interpret data from graphs, charts, and tables (2c).
- Understand and use percentiles (1c).
- Use fractions and percentages (1c).

Suggested practicals

- Investigate human responses to external stimuli.
- Investigate reaction times.
- Investigate the speed of transmission of electrical impulses in the nervous system.

Topic 3 – Genetics

Students should:	Maths skills
3.1B Explain some of the advantages and disadvantages of asexual reproduction, including the lack of need to find a mate, a rapid reproductive cycle, but no variation in the population	
3.2B Explain some of the advantages and disadvantages of sexual reproduction, including variation in the population, but the requirement to find a mate	
3.3 Explain the role of meiotic cell division, including the production of four daughter cells, each with half the number of chromosomes, and that this results in the formation of genetically different haploid gametes The stages of meiosis are not required	
3.4 Describe DNA as a polymer made up of: a two strands coiled to form a double helix b strands linked by a series of complementary base pairs joined together by weak hydrogen bonds c nucleotides that consist of a sugar and phosphate group with one of the four different bases attached to the sugar	
3.5 Describe the genome as the entire DNA of an organism and a gene as a section of a DNA molecule that codes for a specific protein	
3.6 Explain how DNA can be extracted from fruit	
3.7B Explain how the order of bases in a section of DNA decides the order of amino acids in the protein and that these fold to produce specifically shaped proteins such as enzymes	
3.8B Describe the stages of protein synthesis, including transcription and translation: a RNA polymerase binds to non-coding DNA located in front of a gene b RNA polymerase produces a complementary mRNA strand from the coding DNA of the gene c the attachment of the mRNA to the ribosome d the coding by triplets of bases (codons) in the mRNA for specific amino acids e the transfer of amino acids to the ribosome by tRNA f the linking of amino acids to form polypeptides	
3.9B Describe how genetic variants in the non-coding DNA of a gene can affect phenotype by influencing the binding of RNA polymerase and altering the quantity of protein produced	
3.10B Describe how genetic variants in the coding DNA of a gene can affect phenotype by altering the sequence of amino acids and therefore the activity of the protein produced	

Students should:	Maths skills
3.11B Describe the work of Mendel in discovering the basis of genetics and recognise the difficulties of understanding inheritance before the mechanism was discovered	1c 2c, 2e
3.12 Explain why there are differences in the inherited characteristics as a result of alleles	
3.13 Explain the terms: chromosome, gene, allele, dominant, recessive, homozygous, heterozygous, genotype, phenotype, gamete and zygote	
3.14 Explain monohybrid inheritance using genetic diagrams, Punnett squares and family pedigrees	1c 2c, 2e 4a
3.15 Describe how the sex of offspring is determined at fertilisation, using genetic diagrams	1c 2c, 2e 4a
3.16 Calculate and analyse outcomes (using probabilities, ratios and percentages) from monohybrid crosses and pedigree analysis for dominant and recessive traits	1c 2c, 2e 4a
3.17B Describe the inheritance of the ABO blood groups with reference to codominance and multiple alleles	1c 2c, 2e 4a
3.18B Explain how sex-linked genetic disorders are inherited	1c 2c, 2e 4a
3.19 State that most phenotypic features are the result of multiple genes rather than single gene inheritance	
3.20 Describe the causes of variation that influence phenotype, including: a genetic variation – different characteristics as a result of mutation and sexual reproduction b environmental variation – different characteristics caused by an organism’s environment (acquired characteristics)	
3.21 Discuss the outcomes of the Human Genome Project and its potential applications within medicine	
3.22 State that there is usually extensive genetic variation within a population of a species and that these arise through mutations	
3.23 State that most genetic mutations have no effect on the phenotype, some mutations have a small effect on the phenotype and, rarely, a single mutation will significantly affect the phenotype	

Use of mathematics

- Use estimations and explain when they should be used (1d).
- Translate information between numerical and graphical forms (4a).
- Extract and interpret information from graphs, charts and tables (2c and 4a).
- Extract and interpret data from graphs, charts, and tables (2c).
- Understand and use direct proportions and simple ratios in genetic crosses (1c).
- Understand and use the concept of probability in predicting the outcome of genetic crosses (2e).
- Calculate arithmetic means (2b).

Suggested practicals

- Investigate the variations within a species to illustrate continuous variation and discontinuous variation.
- Investigate inheritance using suitable organisms or models.

Topic 4 – Natural selection and genetic modification

Students should:	Maths skills
4.1B Describe the work of Darwin and Wallace in the development of the theory of evolution by natural selection and explain the impact of these ideas on modern biology	
4.2 Explain Darwin’s theory of evolution by natural selection	
4.3 Explain how the emergence of resistant organisms supports Darwin’s theory of evolution including antibiotic resistance in bacteria	2c 4a
4.4 Describe the evidence for human evolution, based on fossils, including: a Ardi from 4.4 million years ago b Lucy from 3.2 million years ago c Leakey’s discovery of fossils from 1.6 million years ago	1a, 1b, 1c 4a
4.5 Describe the evidence for human evolution based on stone tools, including: a the development of stone tools over time b how these can be dated from their environment	
4.6B Describe how the anatomy of the pentadactyl limb provides scientists with evidence for evolution	
4.7 Describe how genetic analysis has led to the suggestion of the three domains rather than the five kingdoms classification method	
4.8 Explain selective breeding and its impact on food plants and domesticated animals	
4.9B Describe the process of tissue culture and its advantages in medical research and plant breeding programmes	
4.10 Describe genetic engineering as a process which involves modifying the genome of an organism to introduce desirable characteristics	
4.11 Describe the main stages of genetic engineering including the use of: a restriction enzymes b ligase c sticky ends d vectors	
4.12B Explain the advantages and disadvantages of genetic engineering to produce GM organisms including the modification of crop plants, including the introduction of genes for insect resistance from <i>Bacillus thuringiensis</i> into crop plants	

Students should:	Maths skills
4.13B Explain the advantages and disadvantages of agricultural solutions to the demands of a growing human population, including use of fertilisers and biological control	2c 4a, 4c
4.14 Evaluate the benefits and risks of genetic engineering and selective breeding in modern agriculture and medicine, including practical and ethical implications	2c 4a, 4c

Use of mathematics

- Translate information between numerical and graphical forms (4a).
- Construct and interpret frequency tables and diagrams, bar charts and histograms (2c).
- Plot and draw appropriate graphs, selecting appropriate scales for axes (4a and 4c).
- Extract and interpret information from graphs, charts and tables (2c and 4a).
- Extract and interpret data from graphs, charts, and tables (2c).
- Understand and use direct proportions and simple ratios in genetic crosses (1c).
- Understand and use the concept of probability in predicting the outcome of genetic crosses (2e).

Topic 5 – Health, disease and the development of medicines

Students should:	Maths skills
5.1 Describe health as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity, as defined by the World Health Organization (WHO)	
5.2 Describe the difference between communicable and non-communicable diseases	
5.3 Explain why the presence of one disease can lead to a higher susceptibility to other diseases	2c, 2d, 2g 4a, 4c
5.4 Describe a pathogen as a disease-causing organism, including viruses, bacteria, fungi and protists	
5.5 Describe some common infections, including: a cholera (bacteria) causes diarrhoea b tuberculosis (bacteria) causes lung damage c Chalara ash dieback (fungi) causes leaf loss and bark lesions d malaria (protists) causes damage to blood and liver e HIV (virus) destroys white blood cells, leading to the onset of AIDS f stomach ulcers caused by Helicobacter (bacteria) g Ebola (virus) causes haemorrhagic fever	
5.6 Explain how pathogens are spread and how this spread can be reduced or prevented, including: a cholera (bacteria) – water b tuberculosis (bacteria) – airborne c Chalara ash dieback (fungi) – airborne d malaria (protists) – animal vectors e stomach ulcers caused by Helicobacter (bacteria) – oral transmission f Ebola (virus) – body fluids	
5.7B Describe the lifecycle of a virus, including lysogenic and lytic pathways	
5.8 Explain how sexually transmitted infections (STIs) are spread and how this spread can be reduced or prevented, including: a <i>Chlamydia</i> (bacteria) b HIV (virus)	
5.9B Describe how some plants defend themselves against attack from pests and pathogens by physical barriers, including the leaf cuticle and cell wall	
5.10B Describe how plants defend themselves against attack from pests and pathogens by producing chemicals, some of which can be used to treat human diseases or relieve symptoms	5c

Students should:	Maths skills
5.11B Describe different ways plant diseases can be detected and identified, in the lab and in the field including the elimination of possible environmental causes, distribution analysis of affected plants, observation of visible symptoms and diagnostic testing to identify pathogens	2d 4c 5c
5.12 Describe how the physical barriers and chemical defences of the human body provide protection from pathogens, including: a physical barriers, including mucus, cilia and skin b chemical defence, including lysozymes and hydrochloric acid	5c
5.13 Explain the role of the specific immune system of the human body in defence against disease, including: a exposure to pathogen b the antigens trigger an immune response which causes the production of antibodies c the antigens also trigger production of memory lymphocytes d the role of memory lymphocytes in the secondary response to the antigen	
5.14 Explain the body's response to immunisation using an inactive form of a pathogen	2c, 2g 4a, 4c
5.15B Discuss the advantages and disadvantages of immunisation, including the concept of herd immunity	2d, 2g 4a, 4c
5.16 Explain that antibiotics can only be used to treat bacterial infections because they inhibit cell processes in the bacterium but not the host organism	5c
5.17B Explain the aseptic techniques used in culturing microorganisms in the laboratory, including the use of an autoclave to prepare sterile growth medium and petri dishes, the use of sterile inoculating loops to transfer microorganisms and the need to keep petri dishes and culture vials covered	
5.18B <i>Core Practical: Investigate the effects of antiseptics, antibiotics or plant extracts on microbial cultures</i>	1a 2c, 2f 5c
5.19B Calculate cross-sectional areas of bacterial cultures and clear agar jelly using πr^2	1a 2c 5c
5.20 Describe that the process of developing new medicines, including antibiotics, has many stages, including discovery, development, preclinical and clinical testing	5c

Students should:	Maths skills
5.21B Describe the production of monoclonal antibodies, including: a use of lymphocytes which produce desired antibodies but do not divide b production of hybridoma cells c hybridoma cells produce antibodies as they divide	
5.22B Explain the use of monoclonal antibodies, including: a in pregnancy testing b in diagnosis including locating the position of blood clots and cancer cells and in treatment of diseases including cancer c the advantages of using monoclonal antibodies to target specific cells compared to drug and radiotherapy treatments	
5.23 Describe that many non-communicable human diseases are caused by the interaction of a number of factors, including cardiovascular diseases, many forms of cancer, some lung and liver diseases and diseases influenced by nutrition	
5.24 Explain the effect of lifestyle factors on non-communicable diseases at local, national and global levels, including: a exercise and diet on obesity and malnutrition, including BMI and waist : hip calculations, using the BMI equation: $\text{BMI} = \frac{\text{weight (kg)}}{(\text{height (m)})^2}$ b alcohol on liver diseases c smoking on cardiovascular diseases	1a, 1c 2c, 2d, 2g 3b 4a, 4c
5.25 Evaluate some different treatments for cardiovascular disease, including: a life-long medication b surgical procedures c lifestyle changes	1c, 1d 2c 4a, 4c

Use of mathematics

- Plot, draw and interpret appropriate graphs (4a, 4b, 4c and 4d).
- Construct and interpret frequency tables and diagrams, bar charts and histograms (2c).
- Understand the principles of sampling as applied to scientific data (2d).
- Use a scatter diagram to identify a correlation between two variables (2g).
- Calculate cross-sectional areas of bacterial cultures and clear agar jelly using πr^2 (5c).

Suggested practicals

- Investigate antimicrobial properties of plants.
- Investigate the conditions affecting growth of microorganisms (using resazurin dye).

Topics for Paper 2

Topic 6 – Plant structures and their functions

Students should:		Maths skills
6.1	Describe photosynthetic organisms as the main producers of food and therefore biomass	
6.2	Describe photosynthesis in plants and algae as an endothermic reaction that uses light energy to react carbon dioxide and water to produce glucose and oxygen	
6.3	Explain the effect of temperature, light intensity and carbon dioxide concentration as limiting factors on the rate of photosynthesis	2c, 2d, 2g 4a, 4c
6.4	Explain the interactions of temperature, light intensity and carbon dioxide concentration in limiting the rate of photosynthesis	4b, 4c, 4d
6.5	<i>Core Practical: Investigate the effect of light intensity on the rate of photosynthesis</i>	2c, 2f, 2g 4a, 4c
6.6	Explain how the rate of photosynthesis is directly proportional to light intensity and inversely proportional to the distance from a light source, including the use of the inverse square law calculation	2g 3a, 3b 4a, 4b, 4c, 4d
6.7	Explain how the structure of the root hair cells is adapted to absorb water and mineral ions	
6.8	Explain how the structures of the xylem and phloem are adapted to their function in the plant, including: <ul style="list-style-type: none"> a lignified dead cells in xylem transporting water and minerals through the plant b living cells in phloem using energy to transport sucrose around the plant 	
6.9	Describe how water and mineral ions are transported through the plant by transpiration, including the structure and function of the stomata	
6.10	Describe how sucrose is transported around the plant by translocation	
6.11B	Explain how the structure of a leaf is adapted for photosynthesis and gas exchange	2d 5c
6.12	Explain the effect of environmental factors on the rate of water uptake by a plant, to include light intensity, air movement and temperature	1a, 1c 2b, 2c 4a, 4b, 4c, 4d
6.13	Demonstrate an understanding of rate calculations for transpiration	1a, 1c 2b, 2c 4a, 4b, 4c, 4d

Students should:	Maths skills
6.14B Explain how plants are adapted to survive in extreme environments including the effect of leaf size and shape, the cuticle and stomata	2d 5c
6.15B Explain how plant hormones control and coordinate plant growth and development, including the role of auxins in phototropisms and gravitropisms	5a
6.16B Describe the commercial uses of auxins, gibberellins and ethene in plants, including: a auxins in weedkillers and rooting powders b gibberellins in germination, fruit and flower formation and the production of seedless fruit c ethene in fruit ripening	4a, 4c

Use of mathematics

- Carry out rate calculations for chemical reactions (1a and 1c).
- Use simple compound measures such as rate (1a, 1c)
- Plot, draw and interpret appropriate graphs (4a, 4b, 4c and 4d).
- Construct and interpret frequency tables and diagrams, bar charts and histograms (2c).
- Understand the principles of sampling as applied to scientific data (2d).
- Use a scatter diagram to identify a correlation between two variables (2g).
- Understand and use simple compound measures such as the rate of a reaction (1a and 1c).
- Understand and use inverse proportion – the inverse square law and light intensity in the context of factors affecting photosynthesis.
- Use percentiles and calculate the percentage gain and loss of mass (1c).
- Use fractions and percentages (1c).
- Calculate arithmetic means (2b).
- Calculate cross-sectional areas of bacterial cultures and clear agar jelly using πr^2 (5c).
- Carry out rate calculations (1a and 1c).

Suggested practicals

- Investigate the effect of pollutants on plant germination and plant growth.
- Investigate tropic responses.
- Investigate the effect of CO₂ concentration or temperature on the rate of photosynthesis.
- Investigate how the structure of the leaf is adapted for photosynthesis.
- Investigate how the loss of water vapour from leaves drives transpiration.
- Investigate the importance of photoperiodicity in plants.

Topic 7 – Animal coordination, control and homeostasis

Students should:	Maths skills
7.1 Describe where hormones are produced and how they are transported from endocrine glands to their target organs, including the pituitary gland, thyroid gland, pancreas, adrenal glands, ovaries and testes	
7.2 Explain that adrenalin is produced by the adrenal glands to prepare the body for fight or flight, including: a increased heart rate b increased blood pressure c increased blood flow to the muscles d raised blood sugar levels by stimulating the liver to change glycogen into glucose	2c 4a, 4c
7.3 Explain how thyroxine controls metabolic rate as an example of negative feedback, including: a low levels of thyroxine stimulates production of TRH in hypothalamus b this causes release of TSH from the pituitary gland c TSH acts on the thyroid to produce thyroxine d when thyroxine levels are normal thyroxine inhibits the release of TRH and the production of TSH	2c 4a, 4c
7.4 Describe the stages of the menstrual cycle, including the roles of the hormones oestrogen and progesterone, in the control of the menstrual cycle	4a
7.5 Explain the interactions of oestrogen, progesterone, FSH and LH in the control of the menstrual cycle, including the repair and maintenance of the uterus wall, ovulation and menstruation	4a, 4c
7.6 Explain how hormonal contraception influences the menstrual cycle and prevents pregnancy	
7.7 Evaluate hormonal and barrier methods of contraception	2c, 2d 4a
7.8 Explain the use of hormones in Assisted Reproductive Technology (ART) including IVF and clomifene therapy	
7.9 Explain the importance of maintaining a constant internal environment in response to internal and external change	
7.10B Explain the importance of homeostasis, including: a thermoregulation – the effect on enzyme activity b osmoregulation – the effect on animal cells	

Students should:	Maths skills
7.11B Explain how thermoregulation takes place, with reference to the function of the skin, including: a the role of the dermis b the role of the epidermis c the role of the hypothalamus	
7.12B Explain how thermoregulation takes place, with reference to: a shivering b vasoconstriction c vasodilation	
7.13 Explain how the hormone insulin controls blood glucose concentration	
7.14 Explain how blood glucose concentration is regulated by glucagon	
7.15 Explain the cause of type 1 diabetes and how it is controlled	
7.16 Explain the cause of type 2 diabetes and how it is controlled	
7.17 Evaluate the correlation between body mass and type 2 diabetes including waist:hip calculations and BMI, using the BMI equation: $\text{BMI} = \frac{\text{weight (kg)}}{(\text{height (m)})^2}$	1a, 1c, 2c 2e, 3a
7.18B Describe the structure of the urinary system	
7.19B Explain how the structure of the nephron is related to its function in filtering the blood and forming urine including: a filtration in the glomerulus and Bowman's capsule b selective reabsorption of glucose c reabsorption of water	
7.20B Explain the effect of ADH on the permeability of the collecting duct in regulating the water content of the blood	
7.21B Describe the treatments for kidney failure, including kidney dialysis and organ donation	
7.22B State that urea is produced from the breakdown of excess amino acids in the liver	

Use of mathematics

- Use simple compound measures such as rate (1a, 1c).
- Plot, draw and interpret appropriate graphs (4a, 4b, 4c and 4d).
- Translate information between numerical and graphical forms (4a).
- Construct and interpret frequency tables and diagrams, bar charts and histograms (2c).
- Understand and use percentiles (1c).
- Extract and interpret data from graphs, charts and tables (1c).

Suggested practical

- Investigate the presence of sugar in simulated urine/body fluids.

Topic 8 – Exchange and transport in animals

Students should:	Maths skills
8.1 Describe the need to transport substances into and out of a range of organisms, including oxygen, carbon dioxide, water, dissolved food molecules, mineral ions and urea	
8.2 Explain the need for exchange surfaces and a transport system in multicellular organisms including the calculation of surface area : volume ratio	1a, 1c 5c
8.3 Explain how alveoli are adapted for gas exchange by diffusion between air in the lungs and blood in capillaries	
8.4B Describe the factors affecting the rate of diffusion, including surface area, concentration gradient and diffusion distance	
8.5B Calculate the rate of diffusion using Fick's law: rate of diffusion $\propto \frac{\text{surface area} \times \text{concentration difference}}{\text{thickness of membrane}}$	1a 3a, 3b, 3d
8.6 Explain how the structure of the blood is related to its function: a red blood cells (erythrocytes) b white blood cells (phagocytes and lymphocytes) c plasma d platelets	1b 2h
8.7 Explain how the structure of the blood vessels is related to their function	1a
8.8 Explain how the structure of the heart and circulatory system is related to its function, including the role of the major blood vessels, the valves and the relative thickness of chamber walls	
8.9 Describe cellular respiration as an exothermic reaction which occurs continuously in living cells to release energy for metabolic processes, including aerobic and anaerobic respiration	
8.10 Compare the process of aerobic respiration with the process of anaerobic respiration	
8.11 <i>Core Practical: Investigate the rate of respiration in living organisms</i>	1a 2a, 2c, 2f 4a, 4c
8.12 Calculate heart rate, stroke volume and cardiac output, using the equation cardiac output = stroke volume \times heart rate	1a 2a, 2c 3a, 3b 4a, 4c

Use of mathematics

- Demonstrate an understanding of number, size and scale and the quantitative relationship between units (2a and 2h).
- **Calculate with numbers written in standard form (1b).**
- Calculate surface area : volume ratios (1c).
- Plot, draw and interpret appropriate graphs (4a, 4b, 4c and 4d).
- Translate information between numerical and graphical forms (4a).
- Construct and interpret frequency tables and diagrams, bar charts and histograms (2c).
- Extract and interpret information from graphs, charts and tables (2c and 4a).
- Extract and interpret data from graphs, charts, and tables (2c).
- Use percentiles and calculate percentage gain and loss of mass (1c).

Suggested practicals

- Investigate the effect of glucose concentration on the rate of anaerobic respiration in yeast.
- Investigate the short-term effects of exercise on breathing rate and heart rate.

Topic 9 – Ecosystems and material cycles

Students should:		Maths skills
9.1	Describe the different levels of organisation from individual organisms, populations, communities, to the whole ecosystem	
9.2	Explain how communities can be affected by abiotic and biotic factors, including: a temperature, light, water, pollutants b competition, predation	4a, 4c
9.3	Describe the importance of interdependence in a community	
9.4	Describe how the survival of some organisms is dependent on other species, including parasitism and mutualism	
9.5	<i>Core Practical: Investigate the relationship between organisms and their environment using field-work techniques, including quadrats and belt transects</i>	1c, 1d, 2b, 2c, 2d, 2f, 2g, 4a, 4c
9.6	Explain how to determine the number of organisms in a given area using raw data from field-work techniques, including quadrats and belt transects	1c, 1d 2b, 2c, 2d, 2g 4a, 4c
9.7B	Explain how some energy is transferred to less useful forms at each trophic level and that this affects the number of organisms at each trophic level, limits the length of a food chain and determines the shape of a pyramid of biomass in an ecosystem	
9.8B	Calculate the efficiency of energy transfers between trophic levels and percentage calculations of biomass	1a, 1b, 1c 2c 4a
9.9	Explain the positive and negative human interactions within ecosystems and their impacts on biodiversity, including: a fish farming b introduction of non-indigenous species c eutrophication	2c, 2g 4a, 4c
9.10	Explain the benefits of maintaining local and global biodiversity, including the conservation of animal species and the impact of reforestation	

Students should:	Maths skills
9.11B Describe the biological factors affecting levels of food security, including: <ul style="list-style-type: none"> a increasing human population b increasing animal farming and the increased meat and fish consumption c the impact of new pests and pathogens d environmental change caused by human activity e sustainability issues, e.g. use of land for biofuel production and the cost of agricultural inputs 	2c 4a, 4c
9.12 Describe how different materials cycle through the abiotic and biotic components of an ecosystem	
9.13 Explain the importance of the carbon cycle, including the processes involved and the role of microorganisms as decomposers	
9.14 Explain the importance of the water cycle, including the processes involved and the production of potable water in areas of drought including desalination	
9.15 Explain how nitrates are made available for plant uptake, including the use of fertilisers, crop rotation and the role of bacteria in the nitrogen cycle	
9.16B Evaluate the use of indicator species as evidence to assess the level of pollution, including: <ul style="list-style-type: none"> a polluted water – bloodworm, sludgeworm b clean water – freshwater shrimps, stonefly c air quality – different species of lichen, blackspot fungus on roses 	2c, 2g 4a, 4c
9.17B Explain the effects of temperature, water content and oxygen availability on the rate of decomposition in food preservation	
9.18B Explain the effects of temperature, water content and oxygen availability on the rate of decomposition in composting	2c 4a, 4c
9.19B Calculate rate changes in the decay of biological material	1c 2c, 2f 4a, 4c
