

1

This question is about life, the Earth and its atmosphere.

- (a) There are many theories about how life was formed on Earth.

Suggest **one** reason why there are many theories.

.....  
.....

(1)

- (b) **In this question you will be assessed on using good English, organising information clearly and using specialist terms where appropriate.**

This Earth and its atmosphere today are not like the early Earth and its atmosphere.

Describe and explain how the surface of the early Earth and its atmosphere have changed to form the surface of the Earth and its atmosphere today.

.....  
.....  
.....  
.....  
.....  
.....

**2**

Some theories suggest that the Earth's early atmosphere was the same as Mars' atmosphere today.

The table below shows the percentage of four gases in the atmosphere of Mars today and the atmosphere of Earth today.

Gases	The atmosphere of	
	Mars today	Earth today
Carbon dioxide	95.00%	0.04%
Nitrogen	3.50%	78.00%
Argon	1.00%	0.96%
Oxygen	0.50%	21.00%

(a) Which **one** of the gases in the table is a noble gas?

.....

(1)

(b) Draw a ring around the correct answer to complete each sentence.

(i) Noble gases are in Group

0
1
7

(1)

(ii) Noble gases are

slightly reactive.
unreactive.
very reactive.

(1)

(c) The percentage of carbon dioxide in the Earth's early atmosphere was 95.00%. It is 0.04% in the Earth's atmosphere today.

(i) Calculate the decrease in the percentage of carbon dioxide in the Earth's atmosphere.

.....

.....

Decrease in percentage = .....%

(1)

(ii) Give **two** reasons for this decrease.

.....  
.....  
.....  
.....

(2)  
(Total 6 marks)

**3**

Scientists study the atmosphere on planets and moons in the Solar System to understand how the Earth's atmosphere has changed.

(a) Millions of years ago the Earth's atmosphere was probably just like that of Mars today.

The table shows data about the atmosphere of Mars and Earth today.

Mars today		Earth today	
nitrogen	3%	nitrogen	78%
oxygen	trace	oxygen	21%
water	trace	water	trace
Carbon dioxide	95%	Carbon dioxide	trace
Average surface temperature $-23^{\circ}\text{C}$		Average surface temperature $15^{\circ}\text{C}$	

The percentages of some gases in the Earth's atmosphere of millions of years ago have changed to the percentages in the Earth's atmosphere today.

For **two** of these gases describe how the percentages have changed **and** suggest what caused this change.

.....  
.....  
.....  
.....

(2)

- (b) Titan is the largest moon of the planet Saturn.  
Titan has an atmosphere that contains mainly nitrogen.  
Methane is the other main gas.

Main gases in Titan's atmosphere	Percentage (%)	Boiling point in °C
Nitrogen	95	-196
Methane	5	-164
Average surface temperature -178°C		

When it rains on Titan, it rains methane!

Use the information above and your knowledge and understanding to explain why.

.....

.....

.....

.....

.....

.....

.....

(2)

- (c) Ultraviolet radiation from the Sun produces simple alkenes, such as ethene (C<sub>2</sub>H<sub>4</sub>) and propene (C<sub>3</sub>H<sub>6</sub>) from methane in Titan's atmosphere.

State the general formula for alkenes.

.....

(1)

(Total 5 marks)

4

The amount of carbon dioxide in the Earth's atmosphere has changed since the Earth was formed.

The amount of carbon dioxide continues to change because of human activities.

- (a) Cement is produced when a mixture of calcium carbonate and clay is heated in a rotary kiln. The fuel mixture is a hydrocarbon and air.

Hydrocarbons react with oxygen to produce carbon dioxide.

Calcium carbonate decomposes to produce carbon dioxide.

- (i) Complete each chemical equation by writing the formula of the other product.

(2)

(ii) Hydrocarbons and calcium carbonate contain *locked up* carbon dioxide.

What is *locked up* carbon dioxide?

.....  
.....  
.....  
.....

(2)

(b) **Graph 1** shows how the percentage of carbon dioxide in the atmosphere changed in the last 4500 million years.

Use information from **Graph 1** to answer these questions.

(i) Describe how the percentage of carbon dioxide has changed in the last 4500 million years.

.....  
.....  
.....  
.....

(2)

(ii) Give **two** reasons why the percentage of carbon dioxide has changed.

.....  
.....  
.....  
.....

(2)

(c) **Graph 2** shows how the percentage of carbon dioxide in the atmosphere changed in the last 250 years.

Should we be concerned about this change in the percentage of carbon dioxide?

Explain your answer.

.....  
.....  
.....  
.....

(2)  
(Total 10 marks)

5

About 3000 million years ago, carbon dioxide was one of the main gases in the Earth's atmosphere.

About 400 million years ago, plants and trees grew on most of the land. When the plants and trees died they were covered by sand and slowly decayed to form coal.

- (a) Describe and explain how the composition of the Earth's atmosphere was changed by the formation of coal.

.....

.....

.....

.....

.....

.....

.....

.....

(3)

- (b) Today, coal is burned in power stations to release the energy needed by industry. Carbon dioxide, water and sulfur dioxide are produced when this coal is burned.

Name **three** elements that are in this coal.

.....

.....

.....

(2)

- (c) In some power stations coal is mixed with calcium carbonate (limestone). The mixture is crushed before it is burned.

- (i) Many chemical reactions happen when this mixture is burned. The chemical equation represents one of these reactions.

Balance the chemical equation.

(1)

(ii) Explain how the use of calcium carbonate in the mixture:

increases atmospheric pollution

.....

.....

.....

.....

decreases atmospheric pollution.

.....

.....

.....

.....

(4)  
(Total 10 marks)

6

The bar chart shows some of the gases in the atmospheres of Earth today and Mars today.

(a) Complete the bar chart to show the percentage of nitrogen in the Earth's atmosphere today.

(1)

(b) Some scientists suggest that the Earth's early atmosphere was like the atmosphere of Mars today.

(i) There is **not** much oxygen in the atmosphere of Mars.

Suggest why.

.....  
.....

(1)

(ii) The percentage of argon in the Earth's atmosphere today is the same as it was in the Earth's early atmosphere.

Suggest why.

.....  
.....

(1)

(c) Compared with the percentage of carbon dioxide in the Earth's early atmosphere there is **not** much carbon dioxide in the Earth's atmosphere today.

Give **one** reason for this change.

.....  
.....

(1)

(d) Draw a ring around the correct answer to complete the sentence.

Some theories suggest that the Earth's early atmosphere was

made by	burning fossil fuels.
	the formation of oceans.
	the eruption of volcanoes.

(1)

(Total 5 marks)

**7** The Earth has a layered structure and is surrounded by an atmosphere.

(a) The diagram shows the layers of the Earth.

Complete the labels on the diagram.

(2)

(b) The data in the table shows the percentages of the gases in the Earth's atmosphere.

Name of gas	Percentage (%) of gas
Nitrogen	78
Oxygen	21
Other gases	1

Present the data in the table on the grid below.

Name of gas

(3)

- (c) Millions of years ago a large meteorite hit the Earth.  
 The meteorite heated limestone in the Earth's crust to a very high temperature.  
 The heat caused calcium carbonate in the limestone to release large amounts of carbon dioxide.

Draw a ring round the correct answer to complete each sentence.

- (i) Carbon dioxide was released because the calcium carbonate was

decomposed.
evaporated.
reduced.

(1)

- (ii) More carbon dioxide in the Earth's atmosphere causes

acid rain.
global dimming.
global warming.

(1)

(Total 7 marks)

8

The Earth has a layered structure and is surrounded by an atmosphere.

(a) Scientists believe that the Earth's atmosphere was formed by volcanoes releasing gases. This early atmosphere was about 95 % carbon dioxide. The composition of the Earth's atmosphere is always changing.

(i) The Earth's atmosphere today contains about 0.035 % carbon dioxide.

What happened to most of the carbon dioxide that was in the Earth's early atmosphere?

.....  
.....  
.....  
.....

(2)

(ii) About 60 million years ago a large meteorite hit the Earth. This meteorite heated limestone in the Earth's crust causing the release of large amounts of carbon dioxide.

Explain how carbon dioxide is released from limestone.

.....  
.....  
.....  
.....

(2)

(b) The graph shows the percentage of carbon dioxide in the Earth's atmosphere over the last 50 years.

Explain, as fully as you can, why we should be concerned about the information displayed on this graph.

.....

.....

.....

.....

.....

.....

.....

.....

(3)

- (c) Scientists believe that all the continents of the Earth were once joined together. The huge 'supercontinent' was called Pangaea.

In 1915, Alfred Wegener had an idea that the change shown in the diagram was caused by *continental drift*. Most scientists could not accept his idea.

- (i) Suggest why most scientists in 1915 could not accept Wegener's idea of *continental drift*.

.....  
.....

(1)

To help you with this question, the information and diagram from the beginning of the question are reproduced here.

The Earth has a layered structure and is surrounded by an atmosphere.

- (ii) Use this information and your knowledge and understanding to explain how continents move.

.....

.....

.....

.....

.....

.....

(3)  
(Total 11 marks)

9

Crude oil is a mixture of hydrocarbons. Most of these hydrocarbons are alkanes.

- (a) The general formula of an alkane is  $C_nH_{2n+2}$

Complete the structural formula for the alkane that has **six** carbon atoms in its molecules.

(1)

- (b) The boiling points of alkanes are linked to the number of carbon atoms in their molecules.

- (i) Describe the link between the number of carbon atoms in an alkane molecule and its boiling point.

.....  
 .....

(1)

- (ii) Suggest **two** reasons why all of the alkanes in the bar chart are better fuels than the alkane with the formula  $C_{30}H_{62}$

1 .....

.....

2 .....

.....

(2)

(c) During the last 200 million years the carbon cycle has maintained the percentage of carbon dioxide in the atmosphere at about 0.03 %.  
Over the last 100 years the percentage of carbon dioxide in the atmosphere has increased to about 0.04 %.  
Most of this increase is caused by burning fossil fuels to heat buildings, to generate electricity and to power our transport.  
Fossil fuels contain carbon that has been locked up for millions of years.

(i) Burning fossil fuels, such as petrol, releases this locked up carbon. Balance the chemical equation for the combustion of one of the alkanes in petrol.

(1)

(ii) Where did the carbon that is locked up in fossil fuels come from?

.....  
.....

(1)

(iii) The burning of fossil fuels has caused the percentage of carbon dioxide in the atmosphere to increase to above 0.03 %.  
Explain why.

.....  
.....  
.....  
.....  
.....  
.....

(2)

(Total 8 marks)

**10**

Many human activities result in carbon dioxide emissions.  
Our carbon footprint is a measure of how much carbon dioxide we each cause to be produced.

(a) Why should we be concerned about our carbon footprint?

.....  
.....  
.....

(1)

- (b) Most power stations in the UK burn coal.  
Coal was formed from tree-like plants over millions of years.

Suggest why burning wood instead of coal would help to reduce our carbon footprint.

.....

.....

.....

.....

.....

(a) Scientists have suggested that:

- the Earth formed as a molten ball of rock and minerals
- the rock and minerals cooled slowly
- the surface of the Earth was covered by volcanoes
- the volcanoes released gases that formed the Earth's early atmosphere.

The pie charts show the approximate percentages of gases in the Earth's early atmosphere and in the Earth's atmosphere today.

(i) Explain what has happened to most of the water vapour in the Earth's early atmosphere.

.....

.....

.....

.....

(2)

(ii) Give **two** reasons why the percentage of carbon dioxide in the Earth's early atmosphere decreased.

1 .....

.....

2 .....

.....

(2)

(b) Scientists have suggested that the Earth consists of a core, mantle and crust.

A 'traditional' theory is that the core is made of iron and nickel.

A 'controversial' theory is that the core is like a nuclear reactor made of the radioactive elements uranium and plutonium.

(i) Why can scientists **not** prove which theory about the core is correct?

.....  
.....

(1)

(ii) How can the 'controversial' theory be used to explain why the Earth's tectonic plates move?

.....  
.....  
.....  
.....  
.....  
.....

(3)  
(Total 8 marks)

**12**

Most power stations burn coal to generate electricity. Burning coal gives off sulfur dioxide gas which can be removed from the waste gases by using limestone. This prevents sulfur dioxide from entering the atmosphere and causing acid rain. One disadvantage of using limestone in a power station is that it releases 'locked up carbon dioxide' into the atmosphere.

(a) How does the limestone used in a power station:

(i) release carbon dioxide

.....  
 .....

(1)

(ii) remove sulfur dioxide?

.....  
 .....

(1)

(b) The waste gases from the chimney are monitored. One toxic gas that should not be released is carbon monoxide.

Explain how carbon monoxide would be formed.

.....  
 .....  
 .....  
 .....

(2)

(c) The use of limestone in a power station releases 'locked up carbon dioxide' into the atmosphere.

(i) Explain the meaning of 'locked up carbon dioxide'.

.....  
 .....  
 .....  
 .....

(2)

(ii) Why does the release of this carbon dioxide cause an environmental problem?

.....  
 .....  
 .....

(1)

(Total 7 marks)

**13**

Billions of years ago, the Earth's early atmosphere was probably like the atmosphere of Venus today.

The table shows a comparison of the atmospheres of the Earth and Venus today.

Name of gas	Percentage composition of atmosphere	
	Earth today	Venus today
Nitrogen	78	3.5
Oxygen	21	a trace
Argon	0.97	a trace
Carbon dioxide	0.03	96.5
<b>Average surface temperature</b>	20 °C	460 °C

(a) Use the names of gases from the table to complete the sentences.

(i) In the Earth's atmosphere today, the main gas is ..... (1)

(ii) In the Earth's atmosphere billions of years ago, the main gas was  
..... (1)

(b) (i) Scientists do **not** know the accurate composition of the Earth's early atmosphere. Suggest why.

.....  
..... (1)

(ii) Use information from the table to answer this question.

Water vapour is present in the atmospheres of the Earth and Venus today.  
The Earth's surface is mainly covered by water.

Suggest why there is no water on the surface of Venus.

.....  
..... (1)

(c) The diagram shows how carbon dioxide is removed from the Earth's atmosphere.

Describe what happened to the carbon dioxide in the Earth's early atmosphere.  
Use the diagram to help you.

**14**

There are many ideas about the formation of the Earth and its atmosphere from a molten ball of rock and minerals.

- (a) One idea is that the Earth's early atmosphere and average surface temperature were probably like that of Venus today.

The table shows information about the Earth and Venus today.

Name of gas	Percentage composition of atmosphere	
	Earth today	Venus today
Nitrogen	78	3.5
Oxygen	21	a trace
Argon	0.97	a trace
Carbon dioxide	0.03	96.5
<b>Average surface temperature</b>	20 °C	460 °C

There is a variable amount of water vapour in both atmospheres.

- (i) How was the Earth's early atmosphere formed?

.....  
 .....

(1)

- (ii) The Earth's average surface temperature decreased over time. At what temperature would oceans have started to form?

Temperature = ..... °C

(1)

- (iii) Describe how the evolution of plants changed the Earth's atmosphere.

.....  
 .....  
 .....  
 .....

(2)

- (b) Another idea was that the Earth's mountains and continents formed in fixed positions as the molten ball of rock and minerals cooled and wrinkled.

Wegener, in 1915, had the idea that the Earth's crust and the upper part of the mantle had cracked into plates that were able to move. His idea meant that the mountains and continents were not in fixed positions.

- (i) Give **one** piece of evidence that led to Wegener's idea being accepted.

.....  
.....

(1)

- (ii) Describe what causes the Earth's tectonic plates to move.

.....  
.....  
.....  
.....  
.....  
.....

(Total 8 marks)

16

Life on Earth would not exist without the atmosphere. Billions of years ago the composition of the Earth's atmosphere was very different from the composition today.

The main gases in the Earth's atmosphere billions of years ago

(a) Label the pie chart below to show the percentages and names of the two main gases in the Earth's atmosphere today.

The main gases in the Earth's atmosphere today

(2)

(b) There is evidence that the composition of the Earth's atmosphere is still changing. One possible reason is that many power stations generate electricity by burning fossil fuels such as coal, oil or natural gas. Sulfur dioxide, SO<sub>2</sub>, is produced when coal burns in air.

(i) What environmental problem does sulfur dioxide cause?

.....  
.....

(1)

(ii) How could this environmental problem be reduced in coal-fired power stations?

.....  
.....

(1)

(iii) Gas-fired power stations burn methane, CH<sub>4</sub>, in air.

Complete the word equation for this reaction.

methane + ..... → carbon dioxide + .....

(2)

(c) Excess carbon dioxide should be prevented from entering the atmosphere.

Explain why.

.....  
.....  
.....  
.....

(2)

- (d) Carbon dioxide is produced when fossil fuels burn in power stations. The diagram represents one idea to prevent excess carbon dioxide from entering the atmosphere.

Use the diagram to explain how carbon dioxide can be prevented from entering the atmosphere.

The bar chart below shows the percentage by mass of gases in dry air. Two of the gases are labelled as A and B.

What are the names of gas A and gas B?

Gas A is .....

Gas B is .....

(Total 2 marks)

25

The bar chart shows the composition of the Earth's atmosphere today, and as it was billions of years ago.

(a) Use information from the bar chart to describe how the atmosphere today is different from the atmosphere of billions of years ago.

.....

.....

.....

.....

(2)

- (b) Describe the processes which have brought about the changes in the proportions of these gases in the air over billions of years.

.....

.....

.....

.....

.....

.....

(4)  
(Total 6 marks)

**26**

For 200 million years the proportions of the different gases in the atmosphere have been much the same as today. Over the past 150 years the amount of carbon dioxide in the atmosphere has increased from 0.03% to 0.04%.

- (a) Describe how carbon dioxide is released into the atmosphere:

- (i) by human and industrial activity;

.....

.....

.....

.....

(2)

- (ii) from carbonate rocks by geological activity.

.....

.....

.....

.....

(2)

(b) Explain how the seas and oceans can decrease the amount of carbon dioxide in the atmosphere.

.....

.....

.....

.....

.....

.....

(3)

(c) (i) Give **one** reason why the amount of carbon dioxide in the atmosphere is increasing gradually.

.....

.....

(1)

(ii) Give **one** effect that increasing levels of carbon dioxide in the atmosphere may have on the environment.

.....

.....

(1)

(Total 9 marks)

27

The amount of carbon dioxide in the atmosphere is increased by reactions that occur in internal combustion engines (X) and is decreased by reactions in sea water (Y).

Describe, in as much detail as you can, the reactions which take place at **X** and **Y**.

(a) **X** .....

.....

Read the passage, which is from the start of a magazine article. It will help you to answer the questions.

## Third rock from the Sun

Geologists now have evidence that the Earth's crust began to form about four and a half billion years ago. The surface of the Earth was then at temperatures well above 100 °C and the atmosphere was mostly carbon dioxide with some ammonia, methane and water vapour. About a quarter of a billion years after it had first formed, the crust had become thicker and had cooled down to below 100 °C.

Slowly, over a period of about three billion years, oxygen became established in the atmosphere. Some was released from the Earth's interior by volcanoes and some was produced, by the process of photosynthesis, by algae which had evolved in the seas.

- (a) Explain how the first seas formed.

.....  
 .....  
 .....

(2)

- (b) Briefly describe **two** processes which reduced the proportion of carbon dioxide in the Earth's atmosphere over the period of three billion years.

1. ....

- (a) Apart from water vapour, two gases account for about 99% of the present atmosphere of our planet.

What are the names of these gases?

..... and .....

(1)

- (b) Scientists now have evidence that, over three billion years ago, our planet's atmosphere was mostly a mixture of water vapour, carbon dioxide, methane and ammonia. Since then the mixture has gradually changed.

- (i) Suggest why there is now less water vapour in the atmosphere.

.....  
.....  
.....  
.....

(2)

- (ii) Suggest why there is now less carbon dioxide in the atmosphere.

.....

- (c) The following information suggests that the continents of Africa and South America were once joined together but then began to move apart.

Fossilised remains of a large fern-like plant called *Glossopteris* have been found in the rocks of the Carboniferous period in both Africa and South America.

Fossilised remains of a freshwater reptile called *Mesosaurus* have been found in the rocks of the Permian period in both Africa and South America.

No fossils of identical organisms have been found in the rocks of the Jurassic or the Cretaceous period in Africa or South America.

The following table gives the names of some of the periods in our planet's geological history.

Start of the period millions of years ago	Name of the period
2	Quaternary
65	Tertiary
136	Cretaceous
190	Jurassic
225	Triassic
280	Permian
345	Carboniferous
395	Devonian
435	Silurian
500	Ordovician
570	Cambrian

- (i) Use this information to suggest when Africa and South America began to move apart.  
About ..... million years ago.

(1)

- (ii) What conditions were necessary for Africa and South America to move apart?

.....

.....

.....
